

MELON

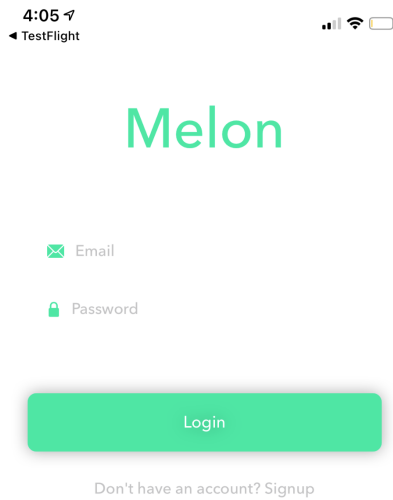

User Guide

Log-In

This is the welcome/initial screen that shows up when you first open the app. Here you will see a welcome message followed by a login button to the bottom.

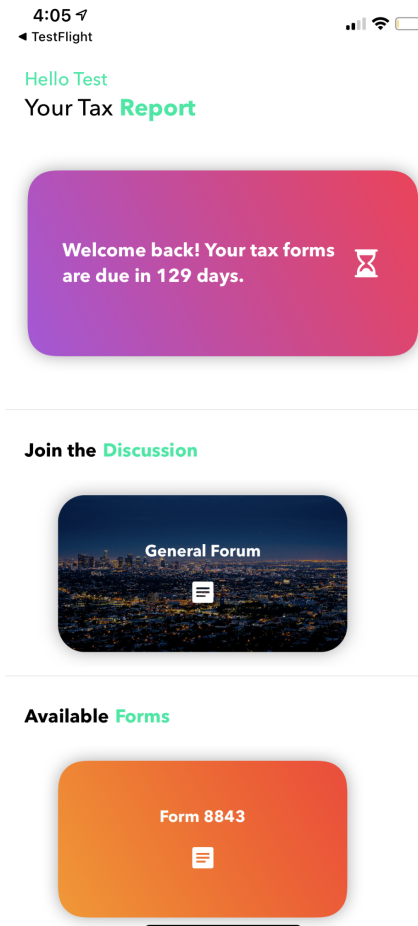

Upon tapping “login” you will be redirected to the following screen:-

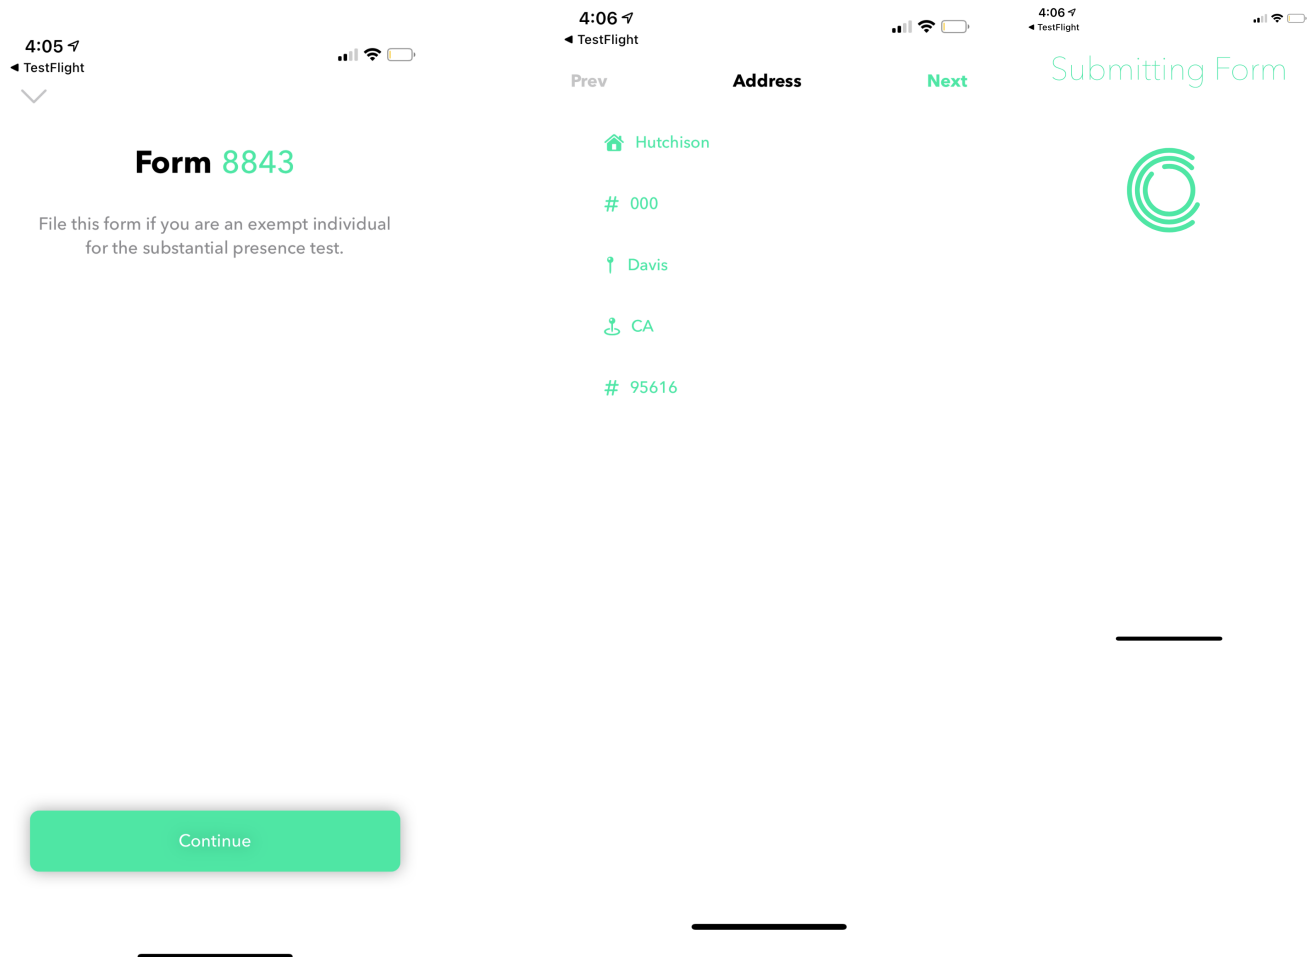

In this screen you will be able to enter your credentials if you are already signed up, if not, you will be able to create a new account.

Home Page

After logging in, the user will have access to the home page. At the top of the homepage, you can find a countdown to the next deadline to submit your tax forms, as a reminder.

You will see the available forms (currently 8843 is available). Once you click on the form you would like to fill out, you will first get a description of the form and will be prompted to press the “Continue” button to fill it out. After this, you will see a series of questions. These questions, similar to the login, employ an autofill mechanism so you can automatically add in previously saved responses.

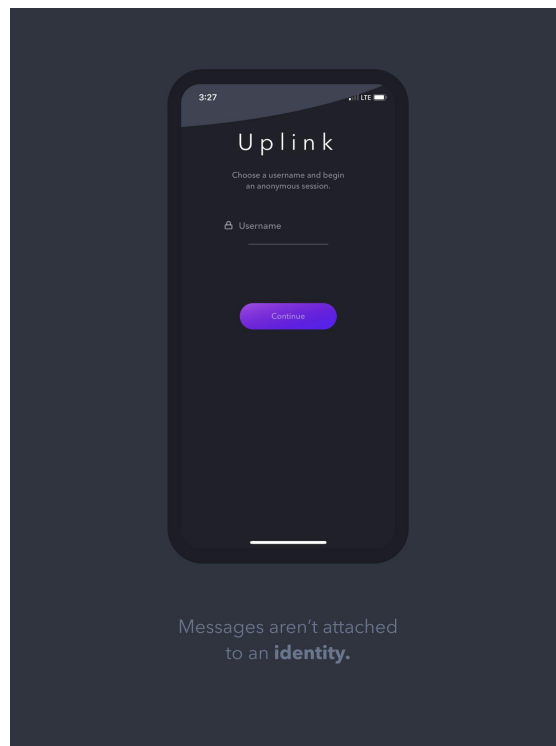

NEBULA

User Guide

Log-In

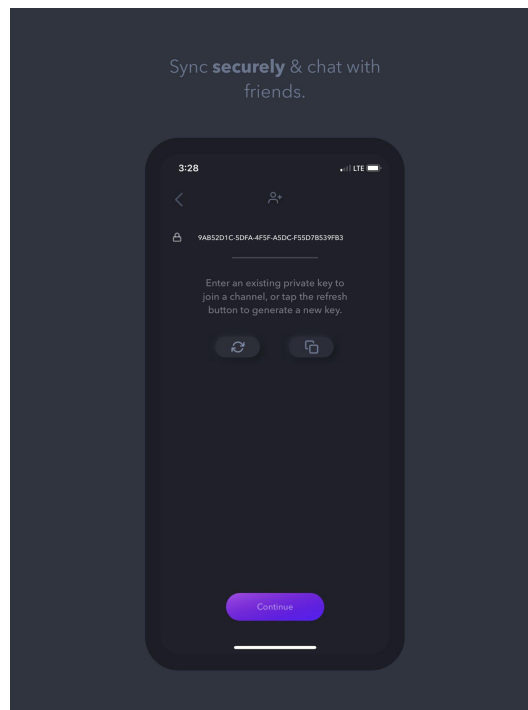

Similar to the Melon app, the Nebula app employs a login page with the autofill feature. Nebula is unique since it does not store a password for the user to log in. The user can add a username of their choice and immediately have access to the app. This also means that once the user logs out, they no longer have access to the username to protect user identities and maintain anonymity if they wish to do so.

Create a Chat

In order to start a new chat (direct or group), the user can simply press the + sign on the homepage after the login or press the “refresh” button on the center-left of the screen. You can then press the “copy” button or manually copy the code and send it to whomever you wish to have a secure conversation with.

If you have received a code from someone else, you can paste it in here as well. The code authenticates your chat and adds everyone with the code to the group.
